

Bullers Wood Year 12 Computer Science A Level Summer Task Due in September

A level CS – Download and use Python 3.4 to complete the database section on www.pythonschool.net

Over the course of the tutorial you will develop a database to represent the order system of a small coffee shop, which will allow customers to be able to order their drinks (and extras) without having to queue up.

Customers should be able to build an order on their smartphone and then submit it whilst they are browsing the web.

Your code must have comments.

Make notes of any section you find difficult.

Hand in on your first Computer Science lesson in September.
